DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, 18-26, 37-45, 56-64, 75-83, and 94-101 are drawn to a method or system which utilizes an allocation memory with an allocation register regulate memory access and manipulation, classified in class 711, subclass 151.
- II. Claims 9-17, 27-36, 46-55, 65-74, 84-93, and 102-110 are drawn to a method or system which utilizes a reclaim memory to search associative memory modules, classified in class 711, subclass 159.

1. The inventions are distinct, each from the other, because of the following reason:
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility. Group I could be usable in devices wherein a reclaim memory is *not* used, for instance, and instead uses the allocation memory to search for data elements. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the

search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.
